

# Cloud Security Posture Management

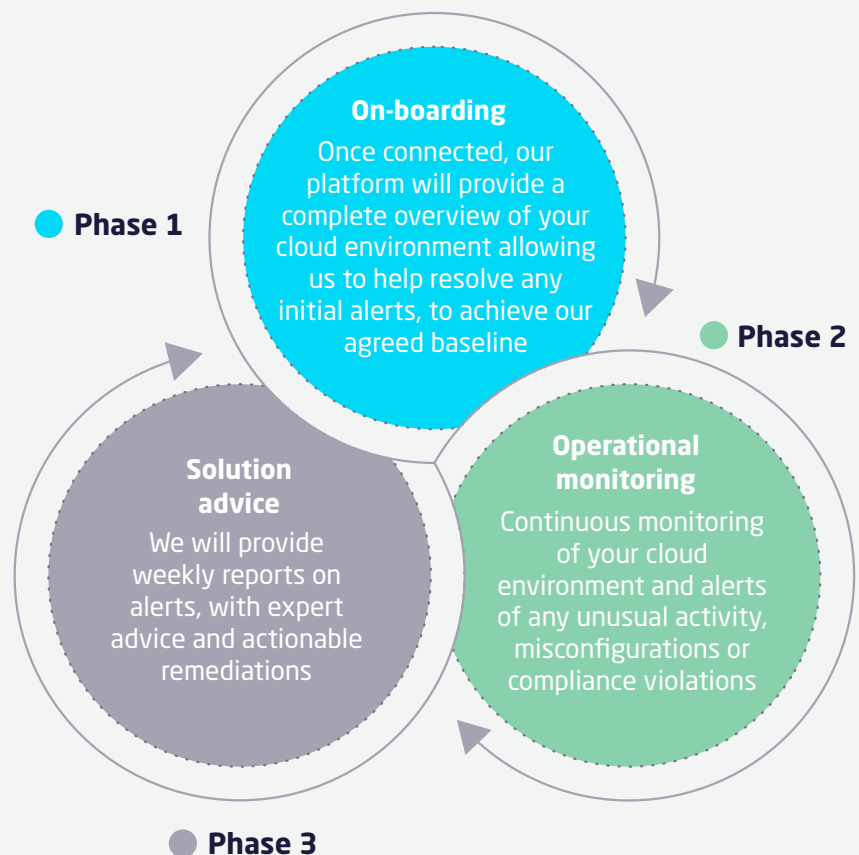

Smart comprehensive security in hybrid & multi-cloud environments

## The Flow approach to cloud security

The complex architecture of cloud and containerised environments means gaining comprehensive visibility is challenging, leaving organisations vulnerable. Flow has launched a SaaS based managed service built on Palo Alto's Prisma Cloud, for Cloud Security Posture Management (CSPM).

This cloud agnostic service provides broad-based support for all contemporary cloud technologies. It enables organisations to manage their cloud debt by staying on top of misconfigurations, potential vulnerabilities, threats and compliance violations, all within a single integrated platform.

**“ Nearly all successful attacks on cloud services are the result of misconfiguration, mismanagement & mistakes. Leaders should invest in CSPM processes & tools to proactively & reactively identify & remediate these risks. ”**  
Gartner

Security is built into the fabric of our solutions, enabling secure and confident business operations.

Flow's CSPM is built on

## Key benefits

1. Receive alerts of potential issues when it matters
2. Have a single pane of glass view
3. Out of the box compliance reports
4. Expert advice on how to remediate cloud issues
5. Manage organisational cloud debt

## Why choose Flow?

- The smart choice for secure cloud transformation
- Over 12 years of experience at the highest level
- We provide efficient and secure hybrid and cloud native solutions
