

# Secure Cloud Transformation

Running servers and applications on-premise is not dead and forgotten - it's commonly the most effective and appropriate way for businesses to operate. However the flexibility, reliability, scalability and security of cloud often makes it a compelling alternative,

When assessing your business IT life cycle it's important to consider whether to replace end-of-life hardware and software with similar on-premise solutions or transitioning to the cloud.

Flow has experience in guiding companies through this complicated and often nuanced decision and we have create a simple workflow to assist our customers.

## Guiding you every step of the way

### 1. Cloud readiness assessment

Discovery session where we will monitor your circumstances such as traffic, IT life cycle & user behaviour to shape our recommendations.

### 2. Cloud design

Through our consultative process we will build a design based on your main drivers for migrating & your desired business outcomes.

### 4. Cloud management

Through our managed services & expert support we can produce solutions to help you manage your cloud estate from subscription spend, through to vulnerabilities & compliance.

### 3. Cloud migration

We will manage the migration project work, from start to finish. Following a systematic approach to best avoid disruption to business operation.

# Secure cloud transformation

Simplify cloud transformation with our proven methodologies to plan, design, migrate and manage your estate in a secure fashion

## Key benefits of working with Flow

### 1. Cloud readiness assessment

Help develop your cloud adoption strategy driven by your desired business outcomes, financial and technical considerations.

### 2. Cloud design

Utilising our experience and expertise to design a blueprint of the proposed cloud environment, together with a detailed project plan.

### 3. Cloud migration

Our skillful team works with you to ensure a secure and streamlined migration with minimal business disruption.

### 4. Cloud management

Ensuring that your cloud environment is maintained to best practice configurations, whilst controlling your cloud spend

We will help you build a cloud strategy which aligns to your business goals whilst delivering maximum benefits with minimal efforts and costs.
